

Terri A. Kuchulis

Certified Public Accountant

Financial Software Consulting Services

Selecting, designing, and implementing the appropriate financial software to improve the way your business accomplishes its mission and increases profitability is a critical step for your organization. Let me help with this opportunity to refine business processes, increase efficiency, and build capacity. I have extensive experience in both multi-million dollar ERP systems and small business stand alone systems. In addition I hold the QuickBooks Certified ProAdvisor designation.

- Software Selection
- Software Implementation
- Certified QuickBooks ProAdvisor

Software selection is the process by which an organization strategically evaluates and acquires new software applications to support its operations. This process is far more important than just picking a tool. It's about improving the way your business accomplishes its mission and expands the effectiveness of services it offers. Fundamentally, software selection is about organizational development. Incorporating new technology is an opportunity to refine business processes, increase efficiency, and build capacity.

Software implementation oversight and project management services involve working hand in hand with your internal project team with the goal of a successful implementation that is on time and on budget. I act on your behalf to help you manage the project, resolve issues, remove roadblocks, and keep the implementation on track.

I am a Certified QuickBooks Pro Advisor with extensive experience achieving the maximum performance from QuickBooks to fit each individual client's needs. I can help with setup, training and ongoing maintenance as well as clean up of your current system.

Exploring how your company can benefit is easy - call or email me now to arrange a time to discuss your business needs.
